

Iteration 6 manual test plan

In this iteration, we tried to fix the counter issue, and other minor bugs inside our matching feature. As the time is very tight for developing, we included a manual test plan for this competition feature.

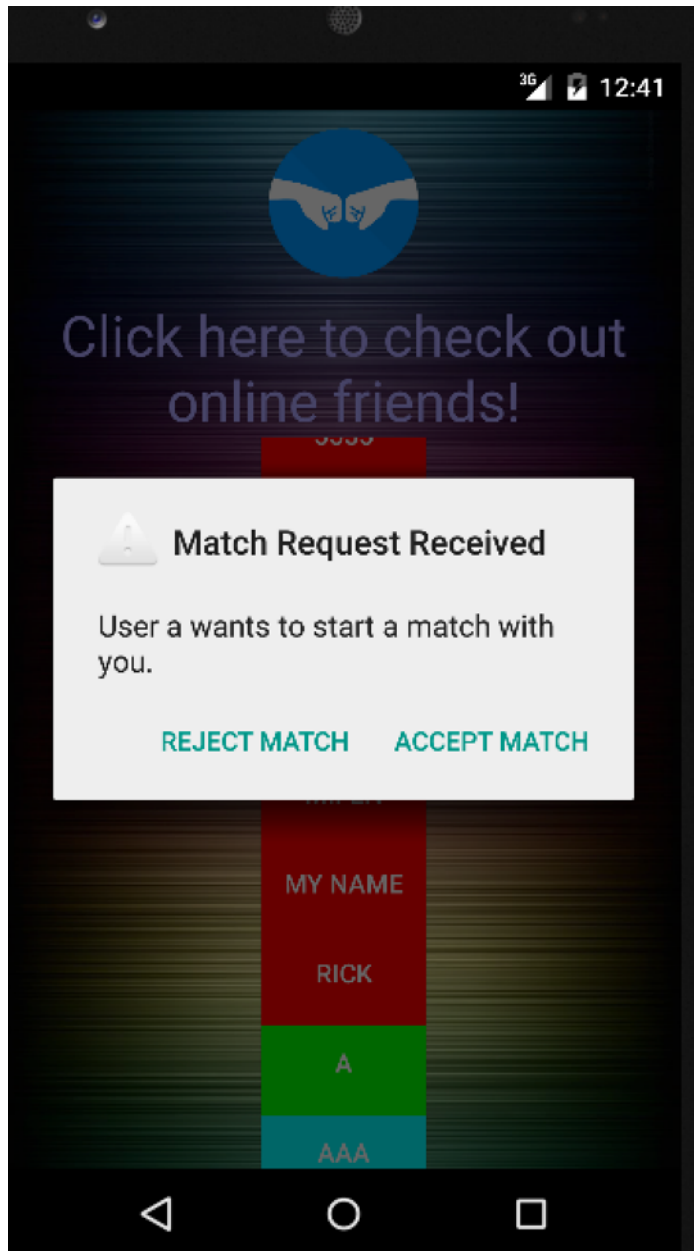

1. Two users navigate to the login page, and sign in with their name & pw.

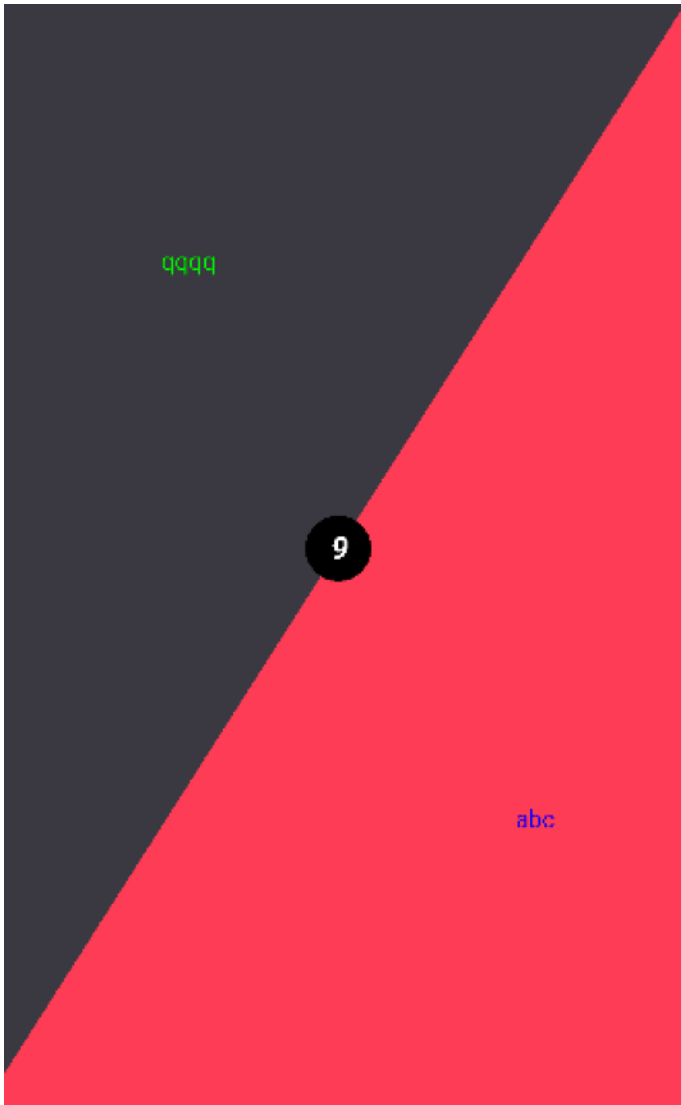

2. In the main screen, click the “match with friend button”

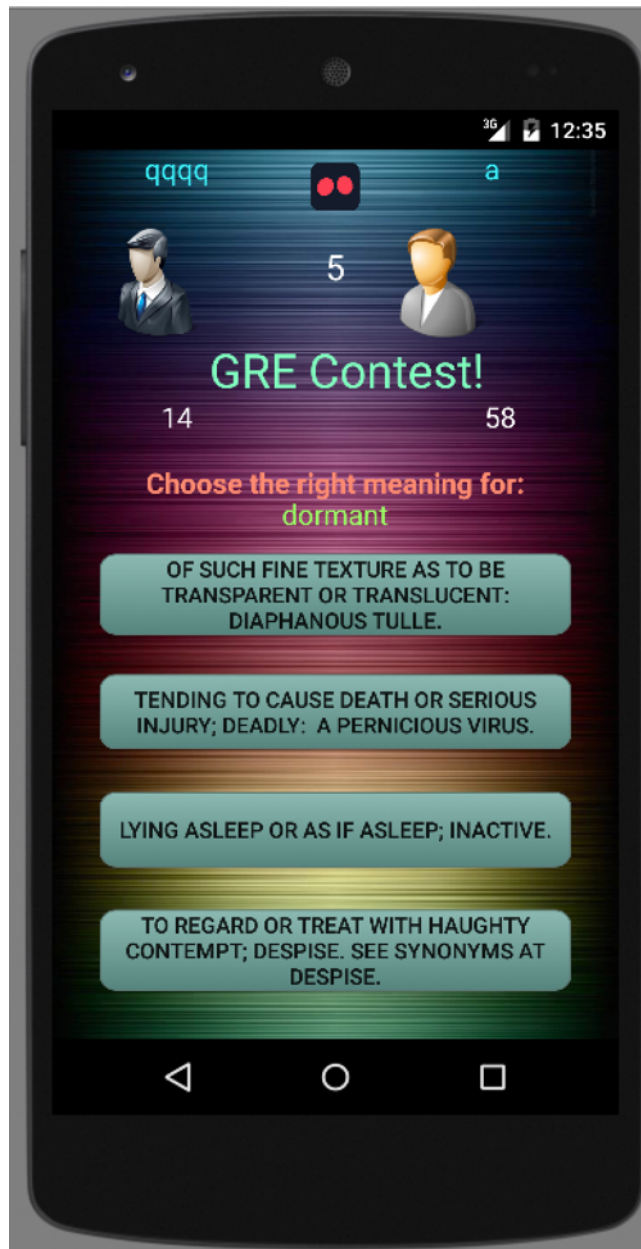

3. find an available friend (name highlight in green), and click on the name will send a match request;
4. The opponent will see a dialog requesting a match!

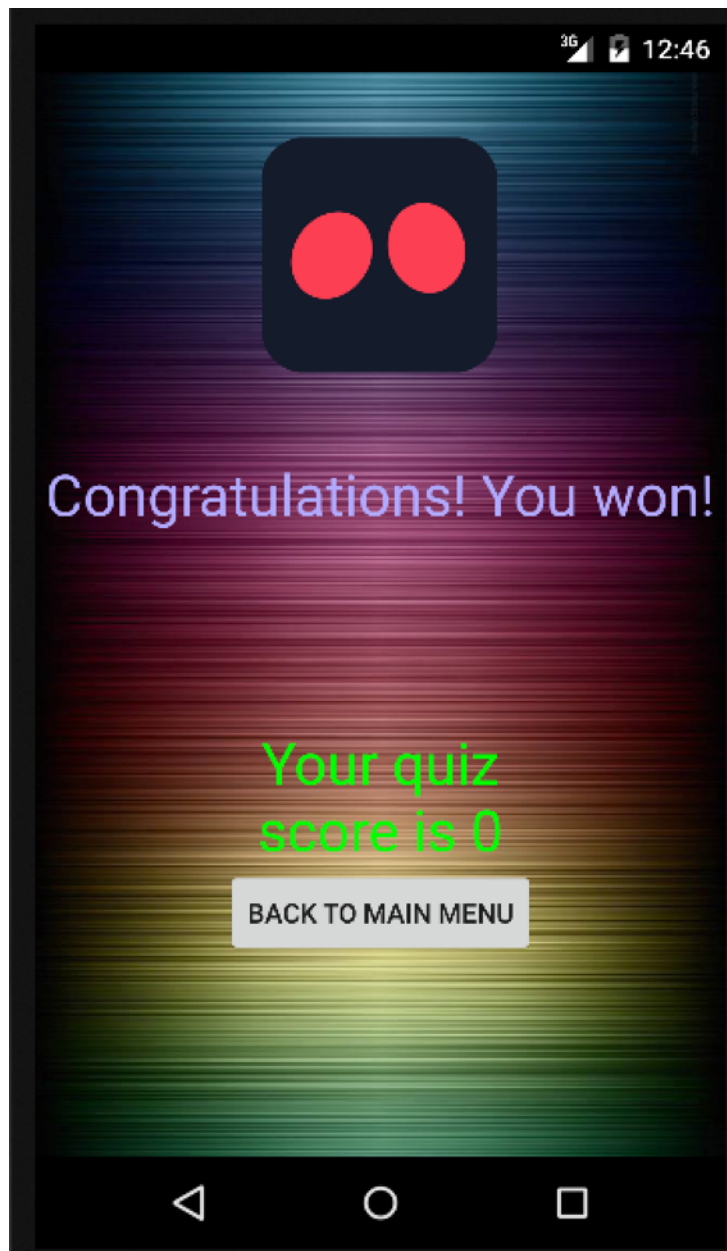

5. see the animation first, and then select a topic to continue:

6. You will be redirected to the contest page!

7. After the competition you will see a result page indicating your score:

That's all, thank you!
